

Metabolomics – Genomics – Lipidomics – Glycomics- Transcriptomics - Phenomics IEMomics – a crosstalk of omics

JIMD Volume 41, May 2018

www.springer.com/medicine/internal/journal/10545

The issue “**IEMomics – a crosstalk of omics**” in *the Journal of Inherited Metabolic Diseases* includes 26 full papers on metabolomics, genomics, lipidomics, glycomics, transcriptomics and phenomics, illustrating that the omics-era has entered the clinical diagnostic laboratories but as well the doctor’s office. The big data that emerge from these novel analytical omics-approaches are very powerful and promising but at the same time show us how little we know about human metabolism. This special issue will inspire you to enter this new world of “omics” and there is lot to discover!

Table of content

- Think big – think omics. *Wevers and Blau*
- Inborn errors of metabolism and the human interactome: a systems medicine approach. *Woidy et al*
- The functional genomics laboratory: functional validation of genetic variants. *Rodenburg*
- Flux analysis in inborn errors of metabolism. *Reijngoud*
- The Role of the Human Metabolome Database in inborn errors of metabolism. *Mandal et al*
- Next-generation metabolic screening: targeted and untargeted metabolomics for the diagnosis of inborn errors of metabolism in individual patients. *Coene et al*
- Promises and pitfalls of untargeted metabolomics. *Gertsman and Barshop*
- Unravelling the unknown areas of the human metabolome: the role of infrared ion spectroscopy. *Martens et al*
- Advances in metabolome information retrieval: turning chemistry into biology. Part I: analytical chemistry of the metabolome. *Tebani et al*
- Advances in metabolome information retrieval: turning chemistry into biology. Part II: biological information recovery. *Tebani et al*
- Structural elucidation of novel biomarkers of known metabolic disorders based on multistage fragmentation mass spectra. *Václavík et al*
- Fast and accurate quantitative organic acid analysis with LC-QTOF/MS facilitates screening of patients for inborn errors of metabolism. *Körver-Keularts et al*
- Multiomics tools for the diagnosis and treatment of rare neurological disease. *Crowther et al*
- Integration of genomics and metabolomics for prioritization of rare disease variants: a 2018 literature review. *Graham et al*
- Targeted versus untargeted omics - the CAFSA story. *Del Mar Amador et al*
- Contribution of tandem mass spectrometry to the diagnosis of lysosomal storage disorders. *Piraud et al*
- Functional characterization of peroxisomal β -oxidation disorders in fibroblasts using lipidomics. *Herzog et al*
- Plasma lipidomics as a diagnostic tool for peroxisomal disorders. *Herzog et al*
- Clinical glycomics for the diagnosis of congenital disorders of glycosylation. *Abu Bakar et al*
- Chemical glycomics enrichment: imaging the recycling of sialic acid in living cells. *Gilormini et al*
- "Transcriptomics": molecular diagnosis of inborn errors of metabolism via RNA sequencing. *Kremer et al*
- Advances in computer-assisted syndrome recognition by the example of inborn errors of metabolism. *Pantel et al*
- Recognizable phenotypes in CDG. *Ferreira et al*
- Text-based phenotypic profiles incorporating biochemical phenotypes of inborn errors of metabolism improve phenomics-based diagnosis. *Lee et al*
- The rendering of human phenotype and rare diseases in ICD-11. *Chute*
- The role of the clinician in the multi-omics era: are you ready? *Van Karnebeek et al*
