United Leukodystrophy Foundation Summary
Family Conference held on June 27 and 28, 2025

The United Leukodystrophy Foundation (ULF) held its 34th annual Scientific Symposium on June 26 and our 43rd annual Family Conference on June 27 and June 28, 2025. We have coupled these two conferences to achieve two key objectives: to bring together global research and clinical experts to discuss the latest research priorities that are underway for leukodystrophy potential treatments and cures and to offer families affected by leukodystrophy opportunities to interact with global experts at our Family Conference. This enables them to talk with experts in a casual environment that is outside of the traditional office visit.

The Family Conference is where the community – patients, families, patient advocacy groups, science and medical experts, and industry partners – participate in education sessions together, engage in evening activities, have meals together, and get to know each other as people rather than as physician and patient or caregiver. The ULF continually strives to strengthen the bonds of the community, so patients and families know they are not alone on their journeys.

The 2025 ULF Family Conference hosted 118 families affected by leukodystrophy who attended in person, 75 virtual attendees who participated both days via live streaming, and 89 speakers who are leukodystrophy subject matter experts,

With financial support from SSIEM, six families affected by leukodystrophy were able to attend the Family Conference who would otherwise not have been able to attend.

The United Leukodystrophy Foundation is grateful to SSIEM for its support of our community. We proudly posted the SSIEM logo on ULF's website and in all conference materials to share with our extensive network how much we value having a relationship with SSIEM and to bring visibility to SSIEM's mission.
